

# Finding the funds

## How to raise money for AEDs

### Making the decision to add AEDs

Automated external defibrillators (AEDs) can have a dramatic, lifesaving impact within organizations and communities. In many places, AEDs have saved lives within weeks, or even days, of being placed into service. Once people recognize the difference AEDs can make, support and enthusiasm for your fundraising program will likely take off. You can easily turn the enthusiasm into financial support if needed. Private donations can supplement or seed municipal or state budgets to get the program started.

Because AEDs are relatively inexpensive, purchasing one or two devices is well within the fundraising abilities of most organizations. Whether your goal is a community-wide AED program, meeting a sports team requirement or a single organization effort, there may be a number of avenues to explore to find funding for multiple devices.

### Sharing stories of survival

People who have survived cardiac arrest are often the best spokespeople to help raise funds for AEDs. We frequently talk with survivors who are articulate, enthusiastic and eager to share their experience. Even those saved by paramedics using manual defibrillators can help promote the need for early CPR and defibrillation. It is difficult to say “no” when you are face-to-face with someone who was literally brought back to life.

Many AED programs are funded through budgets. The nonprofit, organization or agency may simply decide to include the costs of AED program implementation in their budget because they recognize the importance of early CPR and defibrillation. In some situations it is necessary to pursue additional funding sources. If this is the case for your program, there are several funding sources to consider.

## Local civic organizations

Many civic organizations have funds available for community service initiatives and are very approachable. Often, a letter or presentation at a meeting may be all that is needed to help generate funds. Do a web search or check with your local Chamber of Commerce for civic organizations in your community.

Local chapters of groups such as Rotary, Elks, Lions and Kiwanis Clubs, American Legions, VFWs (Veterans of Foreign Wars) and hospital foundations and auxiliaries are often seeking new ways to help local citizens.

## Local corporations and businesses

Corporations may donate to charitable causes through corporate giving programs, company-sponsored foundations or both. Corporate giving is often directed to programs that benefit employees and their families or the community. Businesses can be one of the best funding sources for AED programs.

When considering whom to approach for funding in your community, consider large retailers, insurance companies, public utilities, corporate headquarters, grocery stores, car dealerships, hospitals, cardiologists, and others as potential sources of support.

## Private foundations

Private foundations are non-governmental, non-profit organizations with funds maintained to serve the common good, primarily by providing grants to other nonprofit organizations. Some search engines or libraries enable you to access the Foundation Center's database at [www.foundationcenter.org](http://www.foundationcenter.org). There are 70,000–100,000 foundations and numerous grant opportunities available nationwide.

Examples of foundations might include a variety of major manufacturers and service providers such as, Bridgestone/Firestone, Ford, Allstate, Bank One, Wells Fargo, and Blue Cross/Blue Shield.

## Public charities

Public charities receive their funds from the general public. Their goal is to enhance the quality of life in the local community. Look for community foundations in your area in the same ways recommended above for finding local civic organizations.

Examples of community foundations include the Seattle Foundation and Denver Community Foundation.

## Fundraisers

Some entities raise money for AED programs by planning fundraising events. While such efforts can be time-consuming, they can also be very effective as well as help bring people together and raise awareness about sudden cardiac arrest (SCA) and AEDs.

Examples of fundraisers include marathons, golf tournaments, letter campaigns to area businesses, raffles of donated items, breakfast or dinner events, holiday events, a refreshment stand at local sports event, bake sales, and bingo games, among others.

## Local business sponsorships

Enlist the aid of a local champion who is a recognized leader in the business community. Ask him or her to challenge other local businesses to each donate enough money to purchase one or two (or more) AEDs.

## Fundraising tips

- Use marketing literature from Stryker to raise awareness about SCA and AEDs among those you will approach for donations.
- Fundraising efforts are generally more successful if you ask for a specific sum of money. You may want to identify several different donation levels at set ranges (\$25-99, \$100-199, \$200- 299, etc.) and name each level (silver, gold, platinum, etc.).
- Offer to recognize donors' contributions. Some donors choose to remain anonymous, but most people like to see some recognition of their gifts whether their name is listed in a quarterly newsletter or on a plaque.
- Donors often want to know if their gifts are tax deductible. There may be an established charitable organization in your community through which donations can be made. Their tax advisor and those charitable organizations can help them determine whether or not their gift is tax deductible.
- It may help with some donors to know where the AEDs will be placed after they are purchased. If you are fundraising for a school or business, you may have plans to eventually have enough AEDs to reach anyone in your facility or on your campus. Keep in mind difficult-to-access, restricted or remote locations that may also need AED coverage.
- If you are fundraising for a sports program, you may have plans for one AED per team or facility so a potentially life-saving shock may be given to team members, coaches and spectators. Again, keep in mind difficult-to-access, restricted or remote locations that may need AED coverage.
- If you are fundraising for a community-wide program, your priority may first be to place AEDs in police cars, and then in public facilities such as city hall and stadiums. If you do not have a plan for where the devices will be placed, some donors may be reluctant to participate.

## Fundraising checklist

- ☐ **Designate** a fundraising leader, form a committee and designate responsibilities
- ☐ **Champion** the AED program and raise awareness among relevant community representatives and groups, using marketing literature from Stryker
- ☐ **Assess** how many AEDs are needed and where they'll provide the most coverage
- ☐ **Assess** availability of training and estimate costs
- ☐ **Develop** a target goal for your fundraising, based on the above assessments
- ☐ **Announce** fundraising activities to appropriate audiences
- ☐ **Distribute** a fundraising letter, flyer and/or email as appropriate to potential donors
- ☐ **If you are hosting** a fundraising event, plan and conduct the event
- ☐ **Get ready** for the next steps: purchasing AEDs, conducting CPR/AED training, and implementing your AED program

# You can trust the industry leader.

When SCA strikes, you want to provide the best chance of survival for your employees, customers, students and visitors. That's why Stryker provides the widest range of AEDs, all with clinically proven effectiveness and escalating energy, so you can choose the right fit for your needs and environment.

For brief summaries of important safety and disclosure information regarding LIFEPAK and HeartSine® AEDs, visit our website at [strykeremergencycare.com/disclosure-and-safety-information](https://strykeremergencycare.com/disclosure-and-safety-information).

## Emergency Care Public Access

Stryker's AEDs require a prescription in the U.S. Please consult your physician. AED users should be trained in CPR and in the use of the AED.

Although not everyone can be saved, studies show that early defibrillation can dramatically improve survival rates. AEDs are indicated for use on adults and children. AEDs may be used on children weighing less than 25 kg (55 lbs) but some models require separate defibrillation electrodes.

The information presented is intended to demonstrate Stryker's product offerings. Refer to operating instructions for complete directions for use indications, contraindications, warnings, cautions, and potential adverse events, before using any of Stryker's products. Products may not be available in all markets because product availability is subject to the regulatory and/or medical practices in individual markets. Please contact your representative if you have questions about the availability of Stryker's products in your area. Specifications subject to change without notice.

Stryker or its affiliated entities own, use, or have applied for the following trademarks or service marks: HeartSine, LIFEPAK, Stryker. All other trademarks are trademarks of their respective owners or holders.

The absence of a product, feature, or service name, or logo from this list does not constitute a waiver of Stryker's trademark or other intellectual property rights concerning that name or logo.
